

Phase 7: Project Documentation Phase

Courier Management System (CMS)

8. ADVANTAGES & DISADVANTAGES

Advantages

- Centralized data
- Automated workflows
- Real-time reporting

Disadvantages

- Salesforce dependency
- Requires initial configuration effort

9. Conclusion:

The Courier Management System successfully digitizes and centralizes courier operations using the Salesforce platform. It brings customer management, shipment booking, delivery agent assignment, delivery updates, invoicing, reporting, and dashboard-based monitoring into a single system. By replacing manual and disconnected processes with structured Salesforce objects, validation rules, flows, profiles, roles, reports, and dashboards, the system provides better visibility and improves the overall management of courier activities.

The project also demonstrates how automation can reduce repetitive work and improve the accuracy of operational data. Automated shipment status updates, controlled access, and real-time reports help staff and managers monitor deliveries more efficiently. The centralized approach supports coordination across branches and gives users a clearer view of shipment progress, customer information, agent performance, and revenue-related information.

Overall, the Courier Management System provides a practical Salesforce-based solution for managing day-to-day courier operations. The project meets its main objectives of improving efficiency, reducing manual effort, supporting reliable tracking, and providing useful business insights. The developed system also provides a strong foundation for future enhancements such as mobile tracking, GPS integration, SMS notifications, and AI-based delivery optimization.

10. FUTURE SCOPE

Mobile tracking app

GPS integration

SMS notifications

AI-based delivery optimization
